one of the most important aspects in research fields where mathematics is applied is the construction of a formal model of a real system as for structural relations graphs have turned out to provide the most appropriate tool for setting up the mathematical model this is certainly one of the reasons for the rapid expansion in graph theory during the last decades furthermore in recent years it also became clear that the two disciplines of graph theory and computer science have very much in common and that each one has been capable of assisting significantly in the development of the other on one hand graph theorists have found that many of their problems can be solved by the use of computing techniques and on the other hand computer scientists have realized that many of their concepts with which they have to deal may be conveniently expressed in the language of graph theory and that standard results in graph theory are often very relevant to the solution of problems concerning them as a consequence a tremendous number of publications has appeared dealing with graphtheoretical problems from a computational point of view or treating computational problems using graph theoretical concepts
